"We're working together, with you, for a cleaner safer community!"

Re: Interruption of home, business,  and life, due to **Covid-19**, caused by **SARS-CoV-2**.

The air you breathe, especially with the COVID pandemic lurking, is top priority. Cleaning the air can be as simple as keeping a window open and letting the soft breeze flow in. But not for everyone!

For folks living in an urban setting, or with compromised immunity, it's often smarter to clean the indoor air!

Click <https://www.epa.gov/air-trends/air-quality-cities-and-counties>

In the hot and humid summer season, for most of us, air conditioning is a necessity. Shut the windows and turn the ac on! It's common, convenient, and a cost effective way to keep cool and comfortable.

Here are the health concerns. Indoor air is a mix of clean and dirty, a potential site for microbial growth.

Indoor spaces can be easily sanitized with oxidation, to keep them clean, safe, and odor free. Simply wiping down walls and ceilings does not effectively clean the air, but OUR technology does. *We have solutions.* Like a thunderstorm cleans the outside air with ozone molecules, (think outdoor clothes smell), oxidation can safely and cost effectively treat and maintain healthy indoor air quality. 

SEECC purifies **your** indoor air, with 5 of the most effective oxidizers on the planet! These oxidizers will sanitize your entire space (ceiling to floor and wall to wall)!

Backed by science and SPACE COAST TECHNOLOGY, our technology has been proven to kill, mold, bacteria,

and viruses, including SARS, (the corona virus is now known as SARS-CoV-2), and Influenza.
